EARTHA GROUND CABLES

All ground cables need to connect to an Entreq Ground Box. The Ground box draws the noise, magnetic fields and high frequency interference, in conjunction with the ground cable, away from your sensitive audio products. Careful partnering of Ground cable and Ground box will ensure the optimal results in any given system. All Ertha cables (aka Ground Cables) come as standard with an RCA adaptor, alternative adaptors (RCA, USB, RJ45, XLR Male, XLR Female, Spade/Hook, EU Schuko, US Mains, UK Mains) can be specified at the point of order, please see the list of adaptors.

GROUND BOXES

The Ground Box's mass dictates its capacity to effectively ground any product. The basic rule is to times the effective mass of the ground box by approximately 5 and this will give you the maximum capacity that that individual box can be most effective.

PRIMER RANGE

Considered the entry level to Entreq's range of Signal Cables, however there is nothing entry level regards the performance. Primer Pro cables incorporate almost all the aspects of Entreq's knowledge and experience found in their far more expensive ranges of products. They therefore offer a musical flow, engagement and involvement that most products at many times the price simply cannot match. If natural tone, musicality and incredible value for money is what you are after, then the Primer products are for you!

OLYMPUS RANGE

Please note that the Olympus range of cables all come with captive EEDS ground cables which are 0.27m long and terminated in a Entreq Infinity Hook. This length of EEDS ground cable is the optimal for the performance for the flagship range, however it can be extended by the inclusion of a Himple adaptor and a longer EEDS Ertha Cable. Please see the Himple and the selection on Eartha cables on page 1 of the pricelist. The Olympus cables are built to order and generally afford a 4-6 weeks delivery time.

CLEANUS - PASSIVE MAIN FILTERS

These products are completely passive mains filters. You could more accurately describe them as high frequency separators. High frequency interference and other contaminants are dramatically reduced but without any loss of dynamics or dynamic constraints. The result is a quiet and pitch black background. If you connect to Silver Tellus or Olympus Tellus you will get even better impact.

ACCESSORIES - VIBBEATER

Vibration & energy control, these products are placed on top of equipment & loudspeakers. Carefull positioning can garner very noticeable results, reducing the noise floor and having the ability to shift the entire tonal balance and presentation on a system. When used in partership with Magma Feet the results can be particularly impressive. The Apollo versions have a special silver mixture and come in a wooden box.

ATHENA EQUIPMENT SUPPORT

The Athena support system is a culmination of Entreq's knowledge & combined technologies brought together in a support system primarily focused on the control of unwanted physical parasitic energy, high frequency noise & electronic/electrical based field effects. Therefore, by default it bears little resemblance to almost any other support system currently available. This is simply because it tackles a gamut of problems that traditional HiFi Racks do not take into consideration. The Athena is therefore far more effective on many levels than any other comparably priced solution and can be configured in both performance and price terms to suit each customer's system requirements, thus ensuring a reduction in the noise floor on all three fronts.

The following is a basic outline of the main areas that the Entreq Athena rack is looking to address:

- * Minimal metal construction to reduce the interaction of different metals and their subsequent uncontrolled field effects on the signal themselves
- * Naturally damped, multiple constrained layered construction - not random bits of wood machined in the shape of shelves - also complete non-magnetic material
- * Anti-resonance porting within each shelf
- * Active Silvernet system (entire shelf) to reduce RF/RFI and other noise inducing field effects, lowering the noise floor dramatically.
- * Finally a Solid Silver Grounding point, found on Level 2 and 3 shelf construction, allowing the option to efficiently remove all high frequency induced field effects, leading them away to an Entreq grounding box.

Levels of Performance :

Level 1 : 3 constrained layers, 21 mm thick

Level 2 : 8 constrained layers, 28 mm thick, Silvernet and Silver Ground Post

Level 3 : 11 constrained layers, 49 mm thick, Silvernet and Silver Ground Post
